EDUCATION

Babcock University: Bachelor of Science in Software Engineering (Expected Graduation: July 2026)

TECHNICAL SKILLS

- Languages: JavaScript (ES6+), HTML5, CSS3, TypeScript, Tailwind CSS
- Frontend Frameworks: React.js, Vite
- Backend & Databases: Firebase (Auth, Firestore, Storage)
- Tools & Architecture: Git/GitHub, Web Accessibility (ARIA), Responsive Design, State Management, REST API Integration, Jasmine (Unit Testing)

PROJECTS

CHRONOS | React.js, React Router, Firebase, CSS Modules

E-Commerce Time Travel Booking Agency

- Developed a fully responsive e-commerce app, handling complex shopping cart state and dynamic product filtering.
- Integrated Firebase for secure user authentication, locked down protected routes, and used LocalStorage to keep cart data saved across browser sessions.

Quill AI Assistant | React.js, Vite, Hugging Face API, LocalStorage, ARIA Accessibility

Intelligent Web-Based Writing Assistant

- Engineered a responsive, AI-powered frontend web application, integrating the Hugging Face Inference API to dynamically generate text.
- Implemented persistent state using localStorage to save user draft history across browser sessions.
- Ensured full accessibility of the app for screen-readers and keyboard users by setting up strict keyboard focus traps and aria-live regions.

BabcockSOS | React Native, TypeScript, Firebase, Expo Location, Haptics

Interactive Emergency Response System (Final Year Project)

- Engineered a full-stack, cross-platform mobile application utilizing React Native and Firebase to provide immediate security dispatch via real-time GPS location broadcasting.
- Implemented persistent background tracking, real-time Firestore database listeners for live location updates across devices, and biometric-secured staff dispatch.
- Architected a three-tier ecosystem comprising Student, First Responder, and Admin Command Center modules to facilitate seamless emergency workflow management and task prioritization.
